ACKNOWLEDGEMENT

I would like to express my sincere gratitude to all those who supported and guided me throughout the completion of my internship project.

I am especially thankful to **Prof. P. P. Kakade** (Internship Coordinator) & the management and team of **Softcrowd Technologies** for providing me with the opportunity to undertake this internship in the field of Full Stack Web Development. Their guidance and support helped me gain valuable practical knowledge and industry exposure.

I would like to extend my heartfelt thanks to my mentors for their continuous encouragement, valuable suggestions, and guidance during the development of my project titled “**Data Analytics: Personal Expense Analysis.**” Their support played a crucial role in the successful completion of this project.

I am also grateful to the faculty members of **Brahma Valley College of Engineering and Research Institute, Nashik**, for their constant support and encouragement throughout the internship period.

Finally, I would like to thank my family and friends for their continuous motivation and support, which helped me complete this project successfully.

Vishwajeet Balu Ahire
(T.E Computer Engineering)

ABSTRACT

This project focuses on the analysis and management of personal financial data through a Personal Expenses Tracker using data analytics techniques. The primary objective of the project is to monitor daily expenses, categorize spending patterns, and evaluate financial behavior over a specific period. The dataset used in this project consists of detailed records of daily transactions, including categories such as food, transportation, shopping, bills, and entertainment. Using data analysis tools and techniques, the project aims to identify spending trends, high-expenditure categories, and areas where cost optimization can be achieved. Various analytical methods such as data aggregation, categorization, and visualization have been applied to derive meaningful insights. Graphical representations like pie charts, bar graphs, and trend lines are used to present the data in an easily understandable format. The results of the analysis help in understanding individual spending habits and support better financial planning and decision-making. The project also highlights the importance of budgeting and maintaining financial discipline. Overall, this Personal Expenses Tracker demonstrates how data analytics can be effectively used to improve personal financial management and promote smarter spending practices.

STUDENT SELF-DECLARATION

I hereby declare that the Internship Report entitled “**Data Analytics: Personal Expense Analysis**”, submitted in partial fulfillment of the requirements for the award of the degree of **Bachelor of Engineering in Computer Engineering** under **Savitribai Phule Pune University (SPPU), Pune (2019 Pattern)**, is a record of the original work carried out by me during the internship period.

I further declare that this work has not been submitted to this or any other University or Institution for the award of any degree, diploma, or any other academic qualification. The project work has been carried out under the guidance and supervision of the concerned faculty guide and industry mentor, and all sources of information used in this report have been properly acknowledged

INTERNSHIP COMPANY DETAILS

1. Introduction to the Organization

Softcrowd Technologies is an IT training and software development organization located in Nashik, Maharashtra, India. The organization focuses on providing technical training and practical exposure to students in various domains of information technology.

The company offers industry-oriented training programs and internship opportunities that help students gain real-world experience in software development and modern web technologies. Through these internships, students are able to work on practical projects and improve their technical skills.

Official Website:

<https://softcrowdtech.in>

2. Services Offered

Softcrowd Technologies provides a variety of services including:

- Full Stack Web Development Training
- Software Development
- Web Application Development
- Technical Training Programs
- Internship Programs for Students

These services help students and professionals develop industry-relevant technical skills.

3. Vision and Mission

The vision of Softcrowd Technologies is to provide high-quality technical education and practical knowledge to students so that they can build successful careers in the IT industry.

The mission of the organization is to bridge the gap between academic learning and industry requirements by offering training programs and internship opportunities that focus on real-world software development practices.

4. Internship Experience

During the internship at **Softcrowd Technologies** a project titled “**Data Analytics: Personal Expense Analysis**” was developed as part of the Full Stack Web Development domain.

The project was designed to develop a web-based system that helps mentors manage interns by tracking attendance, tasks, learning activities, and project progress.

The system was developed using **HTML, CSS, JavaScript for the frontend and Node.js, Express.js, and MongoDB for backend and database management.**

This internship provided practical experience in full-stack web development, API development, and database integration. It also helped improve problem-solving abilities and understanding of how real-world web applications are designed and implemented.

INTRODUCTION

2.1 Basic Of Internship :

An internship is a practical training program that provides students with real-world industry experience. It helps in applying theoretical knowledge gained during academics to real-life situations and enhances understanding of how work is carried out in a professional environment. Internships involve working with various tools, technologies, and datasets used in the industry, which improves technical as well as soft skills. The in-ternship at Softcrod Technologies provided exposure to data handling, analysis, and visualization, and also helped in understanding project execution and workplace practices.

2.2 Objective Of Internship

- To gain practical knowledge of data analytics concepts.

- To learn tools such as Microsoft Excel for data analysis and visualization.

- To understand data cleaning, processing, and interpretation techniques.

- To develop the ability to analyze real-world datasets.

- To enhance analytical thinking and decision-making skills.

2.3 Importance of Internship in Computer Engineering

Internships play a vital role in computer engineering as they bridge the gap between theoretical knowledge and practical implementation. They provide industry exposure and help students understand how technical concepts are applied in real-world scenarios. Internships enhance technical skills, improve communication and teamwork abilities, and increase confidence. They also improve employability by providing hands-on experience and preparing students for future job roles in the IT industry. Additionally, they help students gain experience in working with data and analytical tools, which are essential in modern computing fields.

2.4 Project Topic

The project topic focuses on Data Analytics, which involves analyzing data to extract meaningful insights. It includes various processes such as data collection, cleaning, processing, and visualization. The project selected under this topic is a Personal Expenses Tracker, which helps in analyzing financial data and understanding spending patterns. This topic is highly relevant as data analytics is widely used in areas such as business, finance, and decision-making, making it an important field of study.

2.4.1 Personal Expenses Tracker

Data Analytics is the process of examining data to identify patterns, trends, and useful information. It involves techniques such as data cleaning, transformation, and visualization to convert raw data into meaningful insights. Various tools like Microsoft Excel, Power BI, and Python are commonly used in data analytics. It plays a crucial role in improving decision-making and problem-solving. In this project, data analytics is used to analyze personal expenses, helping individuals manage their finances more effectively and make better financial decisions.

OVERVIEW OF COMPANY

3.1 History Of The Company :

Founded on April 2, 2017, in Nashik, Maharashtra, SoftCrowd Technologies began as a specialized digital agency focused on web and mobile application development. Over the years, the company expanded its reach globally, serving clients across the UK, USA, and Australia in sectors like finance and e-commerce. Beyond its role as a software house, it evolved into a significant IT training hub, launching internship and "On-Job Training" programs to bridge the skill gap between academic education and industry demands. Today, it is recognized for both its custom software solutions and its role in placing students in technical roles through partnerships with local engineering colleges.

1. Website:

<https://softcrowdtechnologies.com/>

2. Industry:

Software Development

3. Company Size: SoftCrowd Technologies is a small-sized firm, typically categorized in the 11–50 employees range according to its LinkedIn profile and Zoom-Info directory. Some sources like RocketReach estimate approximately 91 employees, which may include an extended team of developers, digital marketing experts, and training staff. The company operates primarily from its corporate office in Nashik, Maharashtra.

Includes members with current employer listed as shivendu, including part-time roles.

Founded

2nd April 2017

3.2 Vision and Mission

Mission

The company's primary mission is to bridge the gap between academic learning and industry requirements. They aim to achieve this by:

Providing cost-effective, high-quality custom web and mobile application development alongside digital marketing services.

Equipping students and industry professionals with practical, hands-on training and "real-time project exposure" to keep pace with rapid technological changes.

Ensuring customer satisfaction is a top priority by delivering solutions that specifically fulfill evolving business demands.

Vision

SoftCrowd's vision focuses on growth and global leadership in the IT sector. Key elements include:

Becoming a trusted global brand that helps clients worldwide achieve their business objectives.

Developing market-defining, high-quality solutions that provide a competitive advantage for clients through creative design and innovative practices.

Creating "emotional connections" with clients and wholeheartedly committing to the success of the businesses they collaborate with.

3.3 Organizational Structure

SoftCrowd Technologies operates with a functional organizational structure, typical for a small-to-mid-sized digital agency and training institute. The hierarchy is led by executive leadership that oversees specialized departments for technical delivery, marketing, and human resources.

Leadership and Management

Managing Director: Vijay Shirsath leads the overall strategic direction of the company.

Project Management: Vaibhav Desai serves as Project Manager, coordinating between the client requirements and the development teams.

Departmental Breakdown

Product & Engineering: This is the largest department, consisting of approximately 16–20+ staff members. It includes specialized roles such as:

- 1) **Web Development:** PHP, Laravel, Codeignitor, and WordPress Developers.
- 2) **Frontend/Mobile:** Angular, React, Flutter, and Android Developers.
- 3) **Full Stack:** Java and Full Stack Software Developers.

Teaching & Training: A core division that handles the IT institute operations, led by Java and IT Trainers who manage on-job training and internship programs.

Digital Marketing: Managed by Chetan Mahale, this team includes SEO Executives and Social Media Marketing specialists.

Human Resources: Led by Rutuja Patil (HR Executive), this department handles talent acquisition, employee relations, and administrative tasks like front-desk reception.

Quality Assurance (QA): Includes Software Testers and Quality Analysts responsible for project implementation and maintenance.

Internship and Junior Tiers

Due to its focus as a training hub, the structure includes a significant tier of Interns and Trainees (e.g., Software Tester Interns) who work under the guidance of senior developers and trainers.

3.4 Domain of Company

SoftCrowd Technologies operates primarily within the Information Technology (IT) and Services domain, specifically functioning as a dual-purpose digital agency and IT training

institute.

The company categorizes its business activities into two main operational sectors:

1. Digital Solutions & Software Development

The company provides professional full-cycle digital services to a variety of:

Core Services: Specialized in Web Designing, Custom Web Development, Mobile Application Development, and Digital Marketing/SEO.

Enterprise Solutions: Development of CRM and ERP systems, e-commerce platforms, and custom business software.

Industry Verticals: They have completed projects for sectors including Healthcare, Finance, Real Estate, Education, Entertainment, Travel & Tourism, and Social Networking.

2. IT Training & Education

SoftCrowd acts as a technology-oriented educational hub to address industry "technological mismatches".

Educational Domain: They offer industrial training and internships for students (such as MSBTE Polytechnic students) in emerging technologies like Artificial Intelligence (AI), Machine Learning (ML), Data Science, and Full Stack Development.

Focus Areas: Practical, on-job training in frameworks such as React JS, NodeJS, Flutter, and Java.

3.5 Company Infrastructure

SoftCrowd Technologies maintains a focused infrastructure in Nashik, Maharashtra, designed to support its dual operations as a software development agency and an IT training hub.

Physical Office & Location

The company's primary corporate and training facility is located at:

Address: 2nd Floor, Kaveri Sankul, Vakilwadi Corner, Ashok Stambh, Nashik - 422001.

Operating Hours: The office typically operates Monday through Saturday, from 9:00 AM to 7:00 PM.

Facilities and Environment

Digital Studio & Development Lab: The office serves as a "digital studio" where teams develop websites, mobile applications, and interactive games using modern tech stacks like PHP, Angular, and NodeJS.

Technology Platforms: The company emphasizes using industry-standard platforms to ensure robust infrastructure for mission-critical client information systems.

Health and Safety: The facility follows modern workplace protocols, including regular disinfection of surfaces and health checks for staff and visitors.

Key Service Infrastructure

Web Hosting & Domain Services: Beyond software development, they provide scalable web hosting and domain registration infrastructure.

Managed IT Services: Their setup supports "Full-Cycle" services, including maintenance and redesign for diverse portals (E-commerce, Real Estate, Travel).

3.6 Product And Services Offered by Company

SoftCrowd Technologies provides a comprehensive suite of digital solutions for businesses alongside specialized IT training and academic project assistance for students.

IT Services & Solutions

The company offers "full-cycle" professional services for various sectors including healthcare, finance, and e-commerce.

Web Development: Specializes in custom web application development, business website designing, and website redesign or maintenance using technologies like PHP (Laravel, CodeIgniter), Angular, and NodeJS.

Mobile App Development: Offers custom mobile technology solutions for Android and iOS, including cross-platform development with Flutter.

Enterprise Software: Development and implementation of CRM/ERP solutions and specialized billing software.

E-Commerce Solutions: Building online shopping platforms, e-commerce portals, and integrated shopping cart systems.

Marketing Tools: Provides Bulk SMS and Email Marketing services, including a proprietary software tool for managing mass text message campaigns.

Digital Marketing Services

SoftCrowd operates as a digital marketing firm in Nashik, focusing on boosting brand visibility and traffic.

Search Engine Optimization (SEO): Includes managed SEO, local SEO, and link building with a 60-day ranking guarantee.

Social Media Marketing (SMM): Content creation and strategy for social media engagement.

Paid Advertising: Management of Pay-Per-Click (PPC) and targeted lead generation campaigns.

Paid Advertising: Management of Pay-Per-Click (PPC) and targeted lead generation campaigns.

INTERNSHIP ACTIVITY DETAILS

4.1 Internship Duration and Schedule

The internship at SoftCrowd Technologies was conducted from 22nd December 2025 to 7th January 2026, covering a total of 45 days. The daily working hours were from 1:30 PM to 4:30 PM, with the schedule divided into approximately 2 hours of theoretical learning and 2 hours of practical work. The internship program ran 6 days a week, from Monday to Saturday, with Sunday as a weekly off.

4.2 Domain of Work

The domain of work for this internship falls under Data Analytics in the field of Computer Engineering. During the internship, the focus was on analyzing business datasets, creating dashboards, and generating reports using Microsoft Excel and Power BI. This domain involves processing and interpreting data to identify patterns, trends, and insights that can support data-driven decision-making in businesses. It also helps students develop practical skills in data visualization, report generation, and analytical problem-solving.

4.3 Roles and Responsibilities

During my internship at SoftCrowd Technologies, I was assigned various tasks related to the field of Data Analytics. My primary responsibilities included collecting, cleaning, and analyzing data to gain insights and create visual reports.

The main tasks performed during the internship were as follows:

- Learning the basics of Core Python and SQL for understanding data handling.

- Working with Microsoft Excel for data organization, cleaning, and calculations.

- Creating interactive dashboards and visual reports using Power BI.

- Analyzing a sample dataset related to customer sales and profit.

4.4 Team of internship

During my internship at SoftCrowd Technologies, I had the opportunity to work under the guidance of experienced professionals who supported and guided me throughout the training period.

Trainer: Ms. Manisha Deore: Head, Data Analytics Full Stack Trainer, SoftCrowd Technologies, Nashik. She provided valuable training in Data Analytics concepts and tools such as Power BI and Excel, and guided me during the development of my project, “Customer Sales and Profit Analysis Dashboard.”

HR Manager: Ms. Dhanashree Sawant: Human Resource Manager, SoftCrowd Technologies, Nashik. She coordinated the internship schedule, managed orientation sessions, and supported the interns throughout the program.

Our author gave me introductions so that author could understand the project in short time and also assigned me the problem to be fixed. Without his helpful mentoring, author could not involve with the project successfully.

4.5 Technologies Learn under internship

During internship at SoftCrowd Technologies Pvt. Ltd., We was introduced to several tools and technologies related to the field of Data Analytics.

Technologies learned:

- Core Python– For understanding basic programming and data handling concepts.

- SQL– For learning fundamental database operations and data retrieval.

- Microsoft Excel– For performing data cleaning, analysis, and calculations.

- Power BI– For creating interactive dashboards and visualizing data insights.

Learning these technologies helped me understand the complete process of collecting, analyzing, and presenting data in a structured and visual format.

4.6 Requirement Of During Internship

During the internship at SoftCrowd Technologies, certain technical, software, and hardware requirements were necessary to perform data analysis tasks, dashboard creation, and project implementation efficiently.

4.6.1 Software Requirements:

- Operating System: Windows 11

- Applications: Microsoft Excel, Microsoft Power BI Desktop

- Programming Tools: Python (IDLE), MySQL Workbench

- Web Browser: Google Chrome or Microsoft Edge

4.6.2 Hardware Requirements:

Processor : Intel core i5 or above

Memory (RAM): Minimum 8 GB

Hard Disk: Minimum 500 GB

These resources ensured smooth performance during practical sessions, report preparation, and dashboard development activities throughout the internship.

4.7 Daily Activities of Internship

Start Date 22/12/2025

Duration 45 Days

Position Intern

Mode Offline

End Date 07/02/2026

4.8 Theoretical VS Practical Knowledge in Internship

Internship at SoftCrowd Technologies Pvt. Ltd., various technologies and tools were introduced to understand the process of data handling, programming, and visualization. SQL (Structured Query Language) was used to understand relational database concepts and data querying techniques. Different SQL operations such as table creation, data insertion, joins, views, indexes, and triggers were practiced for managing and retrieving data from databases. Python was introduced as a programming language for developing logical problem solving skills. Basic programming concepts such as conditional statements, loops, functions, threading, and simple game development were practiced through coding exercises. For data analysis and reporting, Microsoft Excel was used. Excel helped in performing basic data analysis using formulas and charts to generate insights from datasets. Data visualization was further explored using Power BI, which allowed the creation of interactive reports and dashboards for representing business data in graphical form. These technologies together helped in understanding the complete workflow of data storage, processing, analysis, and visualization.

WORK PROFILE AND TECHNICAL LEARNING

5.1 Technologies and Tools Used

Internship at SoftCrowd Technologies Pvt. Ltd., various technologies and tools were introduced to understand the process of data handling, programming, and visualization. SQL (Structured Query Language) was used to understand relational database concepts and data querying techniques. Different SQL operations such as table creation, data insertion, joins, views, indexes, and triggers were practiced for managing and retrieving data from databases. Python was introduced as a programming language for developing logical problem solving skills. Basic programming concepts such as conditional statements, loops, functions, threading, and simple game development were practiced through coding exercises. For data analysis and reporting, Microsoft Excel was used. Excel helped in performing basic data analysis using formulas and charts to generate insights from datasets. Data visualization was further explored using Power BI, which allowed the creation of interactive reports and dashboards for representing business data in graphical form. These technologies together helped in understanding the complete workflow of data storage, processing, analysis, and visualization.

5.2 Task Discription

During the internship, several practical tasks and assignments were provided to strengthen understanding of programming, database management, and data visualization.

SQL Tasks: SQL was practiced through the development of a Library Management System mini project. In this task, multiple tables were created to manage information related to students, books, and book issuance.

The following operations were performed:

- Creation of tables such as Students, Books, and Issue Books

- Inserting records into tables.

- Retrieving data using JOIN queries

- Using subqueries to fetch specific records
- Implementing triggers to automatically update issued book counts
- Creating indexes to improve query performance

Python Tasks:

Basic programming exercises were performed in Python to improve coding and logical thinking skills. Various programs were written using conditional statements, loops, and functions.

Some tasks included:

- Checking whether a number is divisible by 5 and 11
- Determining whether a number is even or odd
- Checking whether a character is an alphabet
- Developing a simple Rock–Paper–Scissors game

These tasks helped in developing problem-solving abilities and understanding basic programming concepts.

Power BI Tasks:

Power BI was used to create a Housing Facility Report. Data was imported and basic visualizations such as charts and graphs were used to represent housing information. The report helped in understanding how data can be converted into visual insights for decision making.

Excel Tasks:

Microsoft Excel was used to perform basic data analysis on a Borrowed Movie Analysis dataset. Basic calculations and graphical representations were created using Excel charts. This task helped in understanding how spreadsheet tools can be used for simple data analysis and visualization.

5.3 Methodology

The internship followed a structured approach for learning technical skills and applying them through practical tasks. Initially, programming and database concepts were introduced through theoretical explanations and practice exercises. SQL was used for understanding database creation, data manipulation, and automation using triggers. Python programming was practiced to develop logical thinking and problem-solving skills through coding assignments. After learning programming and database concepts, data analysis and reporting tools were introduced. Excel and Power BI were used to create reports and visual dashboards from datasets.

ASSESSMENT

6.1 Skill Gained from Internship

The internship helped in developing several technical and analytical skills. Knowledge of SQL improved the ability to manage relational databases and write queries for retrieving and manipulating data. Basic programming skills were developed through Python exercises which enhanced logical thinking and coding ability. The internship also helped in understanding data analysis using Excel and data visualization techniques using Power BI. Overall, the internship improved problem-solving ability, technical knowledge, and practical understanding of data analysis tools

6.2 Responsibilities Performed During Internship

During the internship, various responsibilities were assigned related to learning and performing technical tasks. These included practicing SQL queries, implementing database operations, solving programming problems in Python, and preparing data analysis reports using Excel and Power BI. The responsibilities also involved understanding datasets, performing analysis, and presenting results in graphical formats

6.3 Internship activities correlated with Classroom knowledge

Yes definitely. The internship activities were closely related to concepts learned during academic coursework. Database management concepts learned in the classroom were applied while creating tables, writing SQL queries, and implementing triggers. Programming knowledge from academic subjects was strengthened through Python coding exercises. Similarly, concepts of data analysis and visualization were applied while creating reports using Excel and Power BI. This helped bridge the gap between theoretical knowledge and practical implementation.

6.4 Tasks Performed:

During the internship, the following tasks were performed: SQL Library Management System mini project Implementation of SQL views, indexes, and triggers Python programming exercises and Rock–Paper–Scissors game Creation of Housing Facility re-port using Power BI Data analysis using Excel on a movie dataset Development of dashboards and graphical reports

6.5 Outcomes Of This Internship:

The internship provided practical exposure to real-world tools used for data management and analysis. It helped in gaining hands-on experience with programming, database systems, and data visualization tools. Through this internship, a better understanding of the complete workflow of data analysis was achieved, starting from database operations to visualization and reporting

PROJECT PERFORMED

7.1 Personal Expenses Analysis

The Personal Expenses Tracker is a data analytics-based project designed to record, manage, and analyze daily financial transactions. It helps in categorizing expenses such as food, transportation, shopping, and bills, allowing users to track their spending habits effectively. By using tools like Microsoft Excel, the project applies data analysis techniques and visualizations to identify spending patterns and areas where expenses can be controlled. The main aim of this project is to promote better budgeting, improve financial discipline, and support informed decision-making for personal financial management.

7.2 Power BI Dashboard

The Power BI dashboard created for the Personal Expenses Tracker project provides an interactive and visually appealing representation of financial data. It is designed to help users easily understand their spending behavior, payment patterns, and overall financial performance. The dashboard combines multiple visual elements such as KPI cards, bar charts, pie charts, and line graphs to convert raw data into meaningful in-sights.

At the top of the dashboard, key performance indicators (KPIs) are displayed, showing important summary values such as total transactions, number of categories, and overall records. These KPIs provide a quick snapshot of the dataset and help users understand the overall scale of their financial activity.

The dashboard includes a “Net Amount by Category” bar chart, which highlights how much money is spent across different categories such as food, shopping, entertainment, health, and utilities. This helps in identifying the highest spending areas, with shopping appearing as one of the major expense categories.

A “Sum of Net Amount by Payment App” chart shows how expenses are distributed across different payment platforms like cash, credit card, debit card, Google Pay, Paytm, and PhonePe. This helps in understanding which payment method is used most frequently.

The “Sum of Cashback by Payment App” donut chart provides insights into cash-back earned through different apps, allowing users to evaluate which platform offers the most benefits. Similarly, the “Sum of Net Amount by Payment Mode” pie chart compares spending across payment types such as UPI, card, and cash.

The dashboard also includes a monthly trend line chart, which shows how expenses vary over time. This helps in identifying patterns such as peak spending months and fluctuations in expenses throughout the year.

To enhance interactivity, the dashboard includes slicers (filters) for month, category, and payment type. These allow users to dynamically filter the data and analyze specific segments, making the dashboard more user-friendly and flexible.

Overall, this dashboard effectively transforms financial data into actionable insights, helping users track expenses, identify spending trends, and make better financial decisions. It demonstrates the practical application of data visualization and analytics tools in personal financial management.

7.3 Excel Dashboard Analysis

The Excel dashboard created for the Personal Expenses Tracker project provides a clear and interactive visualization of financial data, helping users understand their spending behavior effectively. It includes a line chart that shows the total amount spent across different months, allowing users to identify trends and peak spending periods. A bar chart is used to represent category-wise expenses such as education, food, shopping, transport, and utilities, making it easy to identify which category contributes the most to overall spending. The dashboard also includes a pie chart that displays the distribution of expenses based on payment modes like card, cash, and UPI, helping in understanding preferred payment methods. Additionally, slicers for month and category are provided, enabling users to filter the data dynamically and analyze specific segments. Overall, the dashboard presents data in a structured and visually appealing manner, making it easier to analyze expenses, identify patterns, and support better financial decision-making.

7.4 Python Data Analysis Visualization

The data analysis and visualization for the Personal Expenses Tracker project were performed using Python in a Jupyter Notebook environment with libraries such as pandas, matplotlib, and seaborn. The dataset was first imported and cleaned by handling missing values and converting data types to ensure accuracy in analysis. Various visualizations were then created to gain meaningful insights from the data. A line chart was used to analyze monthly expense trends, helping to identify fluctuations and peak spending periods. A bar chart represented category-wise expenses, making it easy to determine which categories contributed the most to overall spending. A pie chart was used to visualize the distribution of payment modes such as cash, card, and UPI, providing an understanding of preferred transaction methods.

Additional bar charts were created to analyze spending across different payment applications and cashback earned, while location-based analysis helped identify where most expenses occurred. A correlation heatmap was also generated to study the relationship between variables like amount, cashback, and net amount. Overall, these visualizations transformed raw data into meaningful insights, enabling better understanding of spending patterns and supporting effective financial decision-making.

INDUSTRY VISIT AND FACULTY INTERACTION

8.1 Faculty Visit Details

First Visit (16/01/2026): The first visit was conducted by Mrs. Gauri Purnaik and Mrs. Bharti Ahuja. They were received by Mr. Vijay P. Shirsath (CEO), Mr. Vaibhav R. Desai (Project Manager), and Ms. Dhanashri Sawant (HR Executive). The company representatives explained the working of the organization and the training process followed for interns, including SQL, Python, Excel, and Power BI. The faculty members discussed the type of projects assigned and observed the workplace environment. Faculty were satisfied with the infrastructure, training quality, and overall guidance provided to the students.

Second Visit (19/01/2026): The second visit was conducted by Mr. Shyamrao Gade and Mr. Ajit Pagar. They were received by Mrs Dhanashri Sawant (HR Executive). During this visit, the faculty members discussed student attendance, discipline, and overall performance. The HR explained the tasks completed by students such as SQL queries, Python coding, Excel analysis, and Power BI dashboards. The faculty members reviewed the project progress and appreciated the efforts of the organization. They expressed satisfaction with the learning environment and student development.

8.2 Student at Workplace

During the internship, students worked as Data Analytics Interns and were involved in various technical activities. The work mainly included SQL query practice, basic Python programming, Excel data analysis, and Power BI dashboard creation. Along with our group, students from other colleges such as Sandip University, MET Institute, and Sapkal College were also present for the internship. This created a collaborative learning environment where students from different backgrounds worked together and shared knowledge. Students followed the daily schedule, completed assigned tasks, and actively participated in training sessions. They maintained discipline and worked under the guidance of trainers and company staff. Students also worked on project development, where they analyzed datasets and created dashboards to represent business insights. They collaborated with peers and improved their problem-solving and analytical skills. The workplace environment was professional, interactive, and supportive, which helped students gain practical knowledge and understand real-world work culture.

8.3 Industry Visit by Faculty

As part of the internship, students were given an opportunity to understand how the organization works through an industry interaction session conducted on 14/02/2026. The session was represented by Mr. Vaibhav R. Desai (Project Manager). During this session, the company representative explained how real-world projects are handled. He described how client requirements are collected, how projects are signed, and how teams work together to complete tasks. Students were also introduced to the workflow followed in the company, including data collection, data processing, analysis, and report generation. The trainer explained the importance of data analytics in decision-making and how tools like SQL, Excel, and Power BI are used in real projects. This visit helped students understand the practical application of concepts and gave them a clear idea about how projects are executed in the industry.

FUTURE SCOPE

The project provided valuable practical knowledge and hands-on experience in the field of data analytics using tools such as SQL, Python, Microsoft Excel, and Power BI. It enabled the analysis of sales performance and customer behavior through the development of a Customer Sales and Profit Analysis Dashboard. By applying data cleaning, transformation, and visualization techniques, meaningful insights were derived, which helped in understanding business trends and improving decision-making. This work builds a strong foundation in data analysis, reporting, and visualization, which are essential skills in today's data-driven environment.

In the future, the project can be further enhanced by incorporating advanced techniques such as predictive analysis and machine learning to forecast sales and profit trends more accurately. Additionally, features like real-time data integration, automation, and advanced Power BI visualizations can be implemented to make the dashboard more interactive, dynamic, and efficient. The skills and knowledge gained from this project can be effectively applied to large-scale datasets and complex business problems. It also opens up career opportunities in fields such as Data Analytics, Business Intelligence, Data Science, and Database Management, where data-driven decision-making plays a crucial role.

CONCLUSION

The Personal Expenses Tracker developed during the Data Analytics internship at Softcrowd Technologies demonstrates the practical application of data analytics concepts in real-world scenarios. The work involved collecting, organizing, and analyzing personal financial data to identify spending patterns and improve financial awareness. Various techniques such as data cleaning, categorization, and transformation were applied to ensure accuracy and consistency. Tools like Microsoft Excel were used to manage datasets, apply formulas, and generate meaningful outputs. Data visualization techniques, including charts, graphs, and dashboards, were implemented to present information in a clear and understandable manner, making it easier to interpret financial data and draw useful insights.

This work helps individuals monitor their financial activities, make informed decisions, and maintain better control over their expenses. By identifying unnecessary spending and highlighting trends, it supports effective budgeting and financial planning. The internship experience also enhanced technical and analytical skills such as problem-solving, logical thinking, and data interpretation. In the future, the system can be improved by incorporating advanced techniques like predictive analytics and machine learning to forecast financial trends. Additional features such as real-time data integration and interactive dashboards can further enhance its usability. Overall, this work provides a strong foundation for applying data analytics in real-life situations and opens up opportunities in fields like Data Analytics, Business Intelligence, and Data Science.

OFFER LETTER

Changes for the Better
www.softcrowdtechnologies.com

Date: 30th Dec, 2025

TO WHOMSOEVER IT MAY CONCERN

To,
Mr. Vishwajeet Ahire

We are pleased to inform you that you have been selected and have accepted the position of Data Analytics Intern at SoftCrowd Technologies, Nashik.

Your internship will be start on 2nd January 2026. We are confident that this opportunity will help you enhance your skills and gain valuable practical experience.

Should you have any questions or require further information, please feel free to contact us. We are pleased that you have decided to join SoftCrowd Technologies and look forward to working with you.

Sincerely
